

NOTICE

This week, we will shut down the drinking water system in the middle of the night Thursday into Friday morning, between the hours of 11:30pm Thursday night 8/6/2015 through 6:00am Friday morning 8/7/2015, so that we can thoroughly clean our Finished Water Storage tank. We have already thoroughly cleaned our Raw Water tank. As it relates to this:

- The times have been selected to avoid disruption to Scotia homes and businesses to the maximum extent practicable. We may complete the process prior to 6am.
- We humbly request that you do your best to refrain from using water between the hours of 1:00am this Friday morning through 6:00am this Friday morning, as we will have a limited supply of water to provide customers while cleaning the tank.
- Once again, as a result of this effort you could possibly experience an additional brief period of mobilized sediment or discoloration.
- We will continue to sample, test and disinfect the water as appropriate.
- You may wish to flush your household water piping through the hose bib or laundry tub if at first you experience any discoloration after we clean the tank. Any discoloration should be short lived.
